

Tyler, TX

Tyler TX was looking for a GIS browser-based application that they could deploy quickly across city departments, allowing end-users to access HTE records stored on an IBM DB2 database system. Freeance allowed them to integrate their existing GIS layers and ArcIMS services directly with their citywide HTE IBM DB2 database.

“Freeance was a very quick solution to all of our ArcIMS needs. After going through the Freeance training, and taking advantage of the powerful tools Freeance has to offer, we were able to deploy our solution city wide within a week.”

“I had talked to other entities that bid out solutions similar to what we wanted. Bids came back to those entities around sixty thousand (60,000) dollars. Freeance gave us a solution that could be implemented within a week instead of months for probably less than ten percent of the cost of developing our own solution.”

“For the City of Tyler, Freeance was a wise and most cost effective solution.”
